Often recognized for his work on the twentieth-century Nobel laureate Bertrand Russell, Andrew Irvine has argued in favour of a physicalist world view and against several commonly held positions in contemporary philosophy, including the view that the German mathematician Gottlob Frege succeeded in developing a workable theory of mathematical Platonism and the view that Bertrand Russell was an advocate of epistemic logicism, a claim one commentator has concluded is now "thoroughly debunked."

He has defended a two-box solution to Newcomb's problem, in which he abandons "the (false) assumption that past observed frequency is an infallible guide to probability." He has also defended a non-cognitivist solution to the liar paradox, noting that "formal criteria alone will inevitably prove insufficient" for determining whether individual sentence tokens have meaning.

In modal logic, he has argued in favour of the non-normal system S7, rather than more traditional systems such as S4 or S5, holding that unlike other systems, S7 allows logicians to choose between competing logics, each of whose theorems, if true, would be necessarily true, but none of which are necessarily the correct system of necessary truths.

Together with Stephen Wexler, Irvine has argued that modern constitutional conceptions of the rule of law can trace their roots as far back as Socrates' demand that even lawmakers must be bound by the law. Together with Jason Gratl, he has argued that, in its more modern form, the rule of law helps resolve tensions between national security and public accountability, a point picked up by the Supreme Court of Canada in *Charkaoui v. Canada* (*Citizenship and Immigration*) [2007].

Together with Joan Bryans, he premiered *Socrates on Trial*, a stage play based on Plato's *Apology* that in the words of one reviewer has become "a worthy analogue of an ancient masterpiece."

Irvine is also the author of the first scholarly bibliography of Canada's premier literary prize, the Governor General's Literary Awards.

His academic work has been translated into French, Spanish, Greek and Italian.

(a) *Areas of special accomplishment*

My main areas of research specialization include the Nobel laureate Bertrand Russell, analytic philosophy, philosophy of logic and mathematics, paradoxes of rationality, the rule of law, and Canadian literary awards.

My academic work has been translated into French, Spanish, Greek and Italian, and my four *Stanford Encyclopedia* articles on Russell have been accessed over 150,000 times a year over the past decade.

I have authored or co-authored and edited or co-edited over a dozen books.

My stage play, *Socrates on Trial*, has been performed internationally.

## 7. Teaching

(a) *Areas of special accomplishment*

In over thirty years of graduate and undergraduate teaching, I have focused on a wide range of subjects, including logic, metalogic, analytic philosophy, set theory, probability theory, philosophy of mathematics, epistemology, metaphysics, philosophy of language, social and political philosophy and philosophy of law.

I have taught at all levels and I have taught large and medium-enrollment courses, as well as seminar courses.

My most popular courses have been the first-year course Introduction to Philosophy, and the two third-year courses, Logic & Computability and Philosophy of Law.

In all the courses I teach, I emphasize writing and communication skills as well as a detailed knowledge of the course subject matter.

In most courses, I try to emphasize a connection between theory (especially clear concept formation) and practice (especially real-world cases or applications, as opposed to toy examples). For example, in my Logic & Computability course, I emphasize the connection between logical metatheory and computer applications, and in my Philosophy of Law course, I emphasize the connection between competing theories of law and how these different theories have effected past and current supreme-court judgments.
